Re: DuSable Park

Dear Joan:

Enclosed as we have discussed are copies of aerial photographs of DuSable Park, taken in March of 1985 and April of 1988 respectively. They were developed from a digitized form of maps acquired from Chicago Aerial Photo Service, phone 630-520-0292.

Kerr-McGee technical staff interprets these photographs to show that a horseshoe shaped pile of material on three sides of a road entering the site was created during the three year period between these two photographs. One can see the shadow from the southern and eastern portions of the pile as the dark areas. The northern face of the pile is in direct sunlight and does not create a shadow. The pile tapers away from the road to the north, east and south. No similar pile of material exists in the 1985 photo.

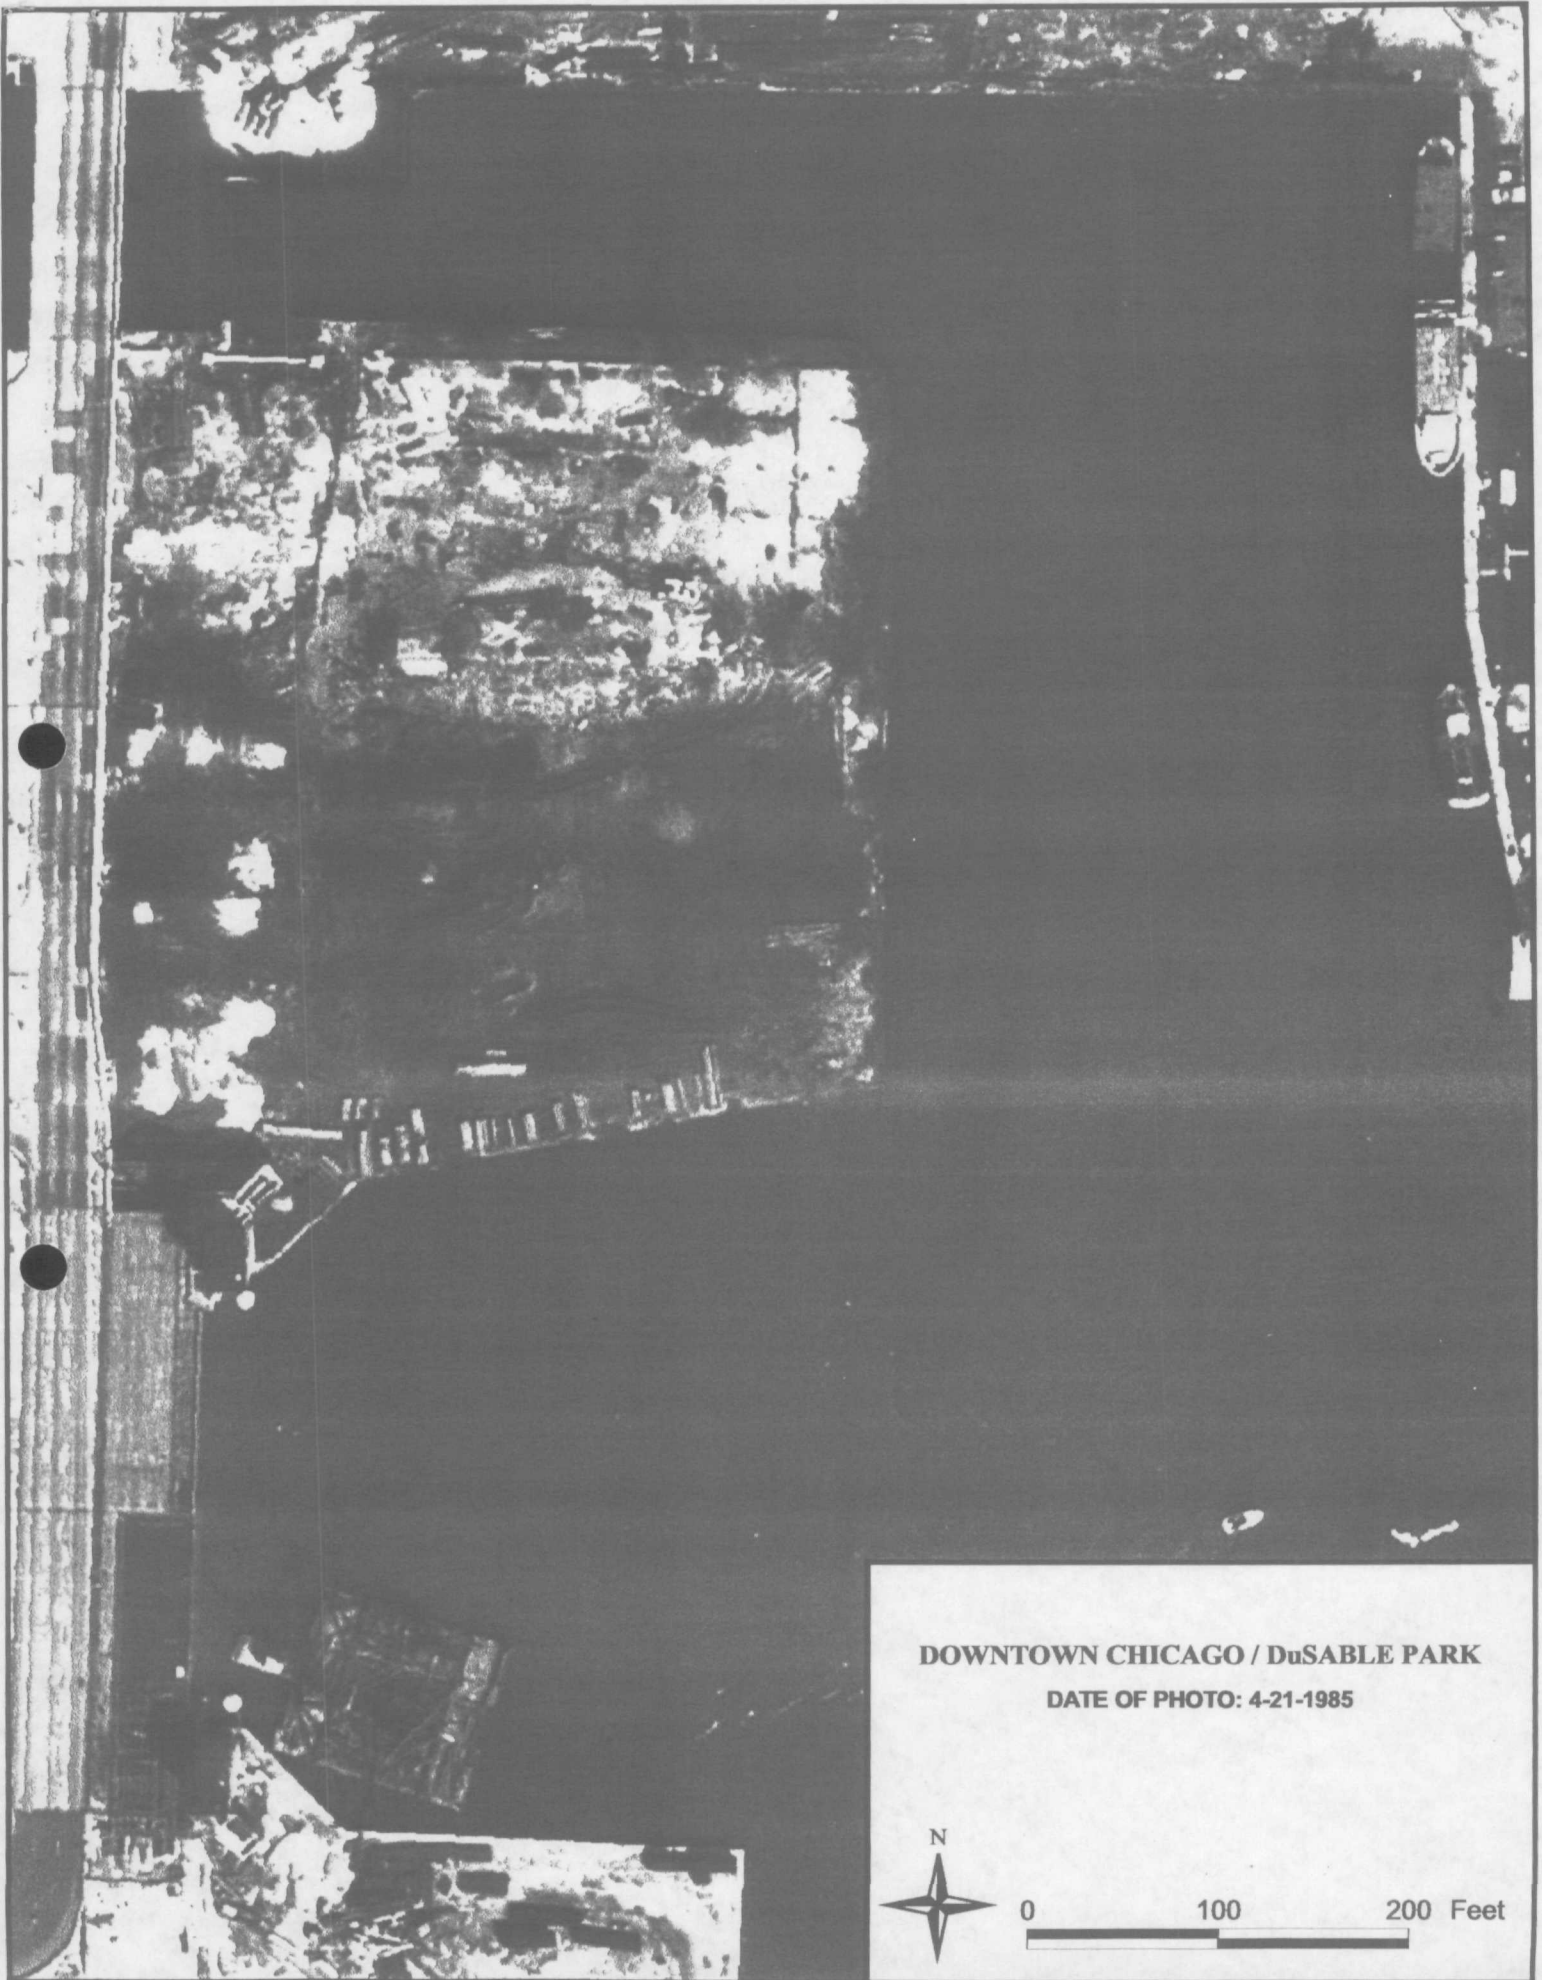

Please call me if you have any questions about these materials.

Sincerely,

John T. Smith II
